

Our City Health

Geo-Centric Location Intelligence for Capital Allocation
Decisions

1,000+ cities. 380,000+ sources. 12 dimensions. One platform.

KEY SUMMARY

The Missing Context Layer

Real estate developers and retail site selection teams have mastered the Financial Stack and the Physical Stack. But the **Social Stack** remains largely unmeasured.

They assess community sentiment by **manual scouting of the district**, like attending town hall meetings — a "1990s workflow" for billion-dollar decisions.

Pitch Line: "Dataminr tells you when the riot starts. We tell you which neighborhood is ready to reach a tipping point 3 months in advance."

Great tools exist for Marketing (Brandwatch) and Government (Zencity). But their architecture doesn't fit private sector location risk. Brandwatch is Entity-Centric (tracks keywords). We are Geo-Centric (track locations).

PROBLEM

The Entitlement Cliff

Developers spend millions on physical due diligence but miss community sentiment. This blind spot costs **HK\$6-8M per year of project delay**.

The Hard Stat

70% of housing projects face community opposition delays costing \$6-8M/year

Current Solution

CoStar/Esri provide demographics but miss sentiment. Brandwatch tracks brands, not locations. Teams rely on manual walks and town halls.

Our Solution

Run a "Civic Health Check" across 12 dimensions for specific cities/districts. Quantify Entitlement Risk before bidding.

SOLUTION

Standardized Civic Intelligence

We transform unstructured global noise into a precise 'Civic Health Index' across 12 dimensions at city and district levels.

12-Dimension Taxonomy

Safety - Crime, violence, policing

Housing - Affordability, availability

Economy - Jobs, business climate

Governance - Trust, corruption

Transport - Infrastructure, congestion

Environment - Air quality, climate

Healthcare - Access, quality

Culture - Arts, vibrancy, events

Education - Schools, universities

Technology - Digital infrastructure

Community - Cohesion, trust

Cost of Living - Affordability index

Products

Corporate Dashboard

Real-time scores, predictive analytics, multi-location comparison, intelligent alerts. Track unlimited cities and districts.

Custom Intelligence Reports

Two types: Predictive (market entry, trajectory) and Analytical (event analysis, recovery timelines). 20+ pages, full citations, 5-7 day turnaround.

MARKET OPPORTUNITY

Commercial Risk Intelligence

\$34B**TAM**

Global Real Estate & Retail Analytics Market

\$8.2B**SAM**

APAC & North America Site Selection Tools

\$120M**SOM**

Year 3 Target (Real Estate + Retail)

Target Customers

PRIMARY: Commercial Real Estate

Land Acquisition Teams quantifying Entitlement Risk before \$50M+ bids.

Target: Mid-size developers, overseas expansion teams

GROWTH: Retail & QSR Site Selection

Explain "why" foot traffic trends change, predict performance.

Target: Regional F&B chains, CPG international expansion

SCALE: P&C Insurance

Parametric risk modeling for property insurance.

Target: Domestic mid-sized insurers

SCALE: Government & Smart City

Policy impact measurement, benchmark against peer cities/districts.

Validates product legitimacy

COMPETITIVE ANALYSIS

We Don't Replace — We Complete

Great civic intelligence tools exist, but their architecture doesn't fit private sector location risk.

Feature	Our City Health	Alert Platforms	Civic/Marketing	GenAI	Consultancies
Output Type	DB + Alerts + Reports	Alerts/Traffic	Dashboards	Text	PDF Reports
Time Horizon	Real-time + 5yr history	Real-time only	Real-time + some	No memory	6-12mo lag
Granularity	City + District	Incident/Store	Entity-centric	Variable	City/Country
Insight Level	"Why" + predictions	"What/Where"	"What" sentiment	Creative	"Why" (lagging)

Why Their Architecture Doesn't Fit

Entity-Centric vs. Geo-Centric

Brandwatch tracks keywords ("Starbucks"). We track locations (select coordinates → capture ALL sentiment about that place).

Government Tool ≠ Developer Tool

Zencity measures policy sentiment for governments. We quantify Entitlement Risk for private developers.

BUSINESS MODEL

Scalable DaaS Engine

All prices in **Hong Kong Dollars (HKD)**

Free

Explorer

- 100 cities (city-level only)
- Basic portfolios
- Basic comparison
- No reports/alerts

HK\$1,500_{/mo}

Professional

- Unlimited cities
- 5 cities district-level
- Email alerts
- Basic predictions

HK\$50,000_{/yr}

Enterprise

- Unlimited district-level
- Custom reports (20+ pages)
- Limited API
- Dedicated CSM

HK\$100,000_{/yr}

Data License

- Full API firehose
- Unlimited calls
- All cities/districts
- White-label option

12-Month Roadmap

Q1: Scale

1,000 cities, 380K+ sources, predictive model development

Q2: Product

Dashboard v1.0, custom reports, solidify predictive analytics

Q3: Beta

API + Dashboard beta, outreach to 20 organizations

Q4: Commercial

Full availability, sign 5+ pilot contracts, revenue generation

CORE TEAM

AI-Native Founder with High Technical Velocity

**Cayden Auyang**

Architect & Founder

- Expert in Agentic AI (Cursor + Google Antigravity) — 5x development speed
- Dedicated Gap Year (2026-2027) — 100% full-time commitment
- Developed 12-dimension taxonomy at Civic AI Group

**Alvin Mok**

Key Advisor

- Chief Information and Data Officer, Select Equity Group
- Former: Head of Global Platform & Insights, Orbis (\$25B+ AUM)
- McKinsey Engagement Manager | Harvard MBA (Baker Scholar - Top 5%)

WHY HKSTP

Strategic Alignment & Landing Plan

 Compute Infrastructure

Scoring 1,000+ cities daily at city/district level requires massive GPU inference. We need HKSTP's supercomputing support.

 Ecosystem Sandbox

HKSTP hosts our exact target clients (Real Estate, Retail, Logistics). Ideal environment for B2B pilots.

 Compliance Guidance

Mentorship on PIPL/GDPR as we expand to GBA and globally.

 Data Partnerships

Licensed API access (GDELT, NewsAPI, Reddit API) — we need capital to scale data infrastructure to 380,000+ sources.

Hong Kong & GBA as Launch Market

HK/GBA SMEs expanding globally are already in HKSTP's ecosystem — providing immediate, warm access to first customers.

Landing Plan

- Immediate: Incorporate HK entity upon acceptance
- 6 months: Hire 1 Business Development Lead + 1 Data Engineer

Traction Plan

- Q1-Q2: Product development + data scaling
- Q3: Beta pilots with HKSTP ecosystem companies
- Q4: First revenue (5+ pilot contracts)

Ready to Build the Global Standard.

Geo-centric location intelligence for capital allocation decisions.

1,000+ cities. 380,000+ sources. 12 dimensions. One platform.
